No. 8	
Organisation Legal Name:	Deutscher Ausschuss für Stahlbeton (German Committee for Structural Concrete)

Additional information on the Company / Institution:	
<p>DAfStb is a non governmental and non profit organisation. It was established in 1907 as a Technical Committee that supports the structural concrete as building material (more or less comparable to ACI). It is located at our national standardisation body, DIN. The work of DAfStb includes research (funding and coordination) in the field of structural concrete (durability, design and construction, environmental aspects) as well as the publication of national guidelines (e.g. SCC, steel fibre reinforced concrete etc. pp) and the participation in the field of standardisation. The research results are published in our own journal (see e.g. www.dafstb.de). The DAfStb itself is funded by associations, representing the related industries, e.g. cement and concrete industry as well as building industry.</p>	

Address

PO Box:	
Street Name and Number:	Burggrafenstraße 6
Post Code:	10787
Town/City:	Berlin
Country Name:	Germany

Contact Person

Family Name:	Wiens
First Name:	Udo
Title (Dr, Prof., ...):	Dipl.-Ing.
Function:	Chief Executive Officer
Telephone No:	+49 30 2601 2039
Fax No:	+49 30 2601 1723
E-mail:	udo.wiens@din.de

Additional information on investigations:

DAfStb is not involved in investigations related to the production of blended cements. But the application of blended cements is integrated part in many research objectives funded by the DAfStb (e. g. on durability aspects or environmental compatibility). Furthermore, in his function as national standardisation body, application rules for blended cements and blended cements in combination with concrete additions (fly ash, silica fume) have been issued by DAfStb and integrated in our national, complementing standard to EN 206-1.

DAfStb has set up a research programme on the transferability of laboratory testing on the freeze-thaw-resistance and the freeze-thaw-resistance with de-icing salts to the practical behaviour of concrete members. Factors influencing the test results as well as the behaviour under practical conditions are part of the investigations (e. g. moisture distribution, temperature conditions, chloride concentration). The aspect of type of cement (mainly CEM I, CEM II, CEM III) will also be regarded.
